

Self-adjusting Cutter-stripper

F-318

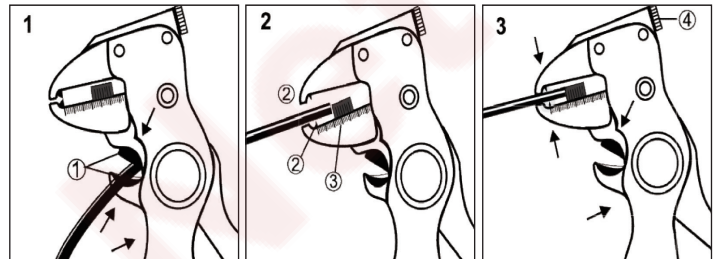

Cable diameter : 0.5 ~ 6.0mm

Length: 165 mm

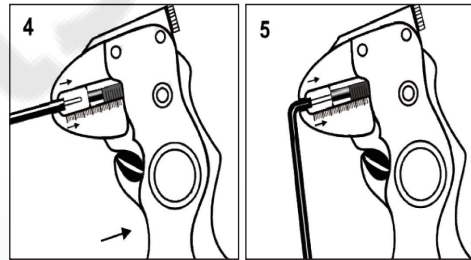

Width: 82 mm

Weight: 230 g

Wire Cutting Function

1. Place cable between cutter and blades (1) and close handles fully.
2. Clamp prepared cable between front blades (2) for the length to be stripped, using as reference millimeter scales (3) laterally positioned.
3. Press on handles, cable is locked by external jaws (4) while the insulation is lightly cut without damaging the conductor(s). For cables with particularly soft or very hard sheath changed blade pressure using the adjustment (4).

4. The complete closing of the handles operates a sliding action of the blades that remove the insulation.
5. Very soft or slippery cables should be clamped as indicated.
